Applications Developed

Property Manager – Live | GitHub

An application to help property managers manage their owned properties and communicate with tenants

- Lead front end developer that delegated tasks for front end development and communicated with backend developers for data needs
- Built with React and Reactstrap
- Backend programmed with PHP and MySQL

Ambiencer – Live | GitHub

Web app that aggregates content based on the mood set by the user.

- Team project 2 day hackathon
- Made API calls using AJAX and displayed sorted results on DOM
- Single page layout using jQuery for transitions between sections

Memory Match Game – Live | GitHub

A basic memory match based off of the popular anime “My Hero Academia”

- Used Javascript/jQuery to dynamically display cards on the DOM
- Utilized Bootstrap CSS library to style the page

Hobbies

I like the sport of weightlifting and trained in the sport for a few years. I came close to competing before I moved to Mexico.

I like to learn new things. I play guitar, alto sax, drums and piano.
